

Congratulations!

You have chosen a mammography center that uses **Beekley skin markers** for a more accurate mammogram!

Did you know that a woman's breast is similar to a fingerprint, no two breasts are alike.

Therefore to ensure the best care, your Technologist uses the Beekley skin marking system as a reference tool for moles, scars, palpable masses and nipples. This assists the Radiologist to better interpret and obtain all possible information on your mammogram. This reduces the risk of you having to be called back for a second appointment.

This facility truly **values you**... the patient... making your mammogram as pleasant, comfortable and accurate as possible.

It is all about Standard of Care, **never settle for less.**
