

Breeza®

Flavored Beverage for
Small Bowel Distention

Breeza® flavored beverage for small bowel distention was designed by a radiologist to support full drinking compliance and consistency across adult and pediatric populations so your team can focus on patient care and workflow efficiency.

- Supports radiologist confidence in delivering accurate, timely next steps through optimal small bowel distention
- Helps reduce the need for repeat exams, saving your department time and expense
- Supports a better patient experience with two flavor options designed to encourage drinking compliance and increase the likelihood of returning for future exams
- Accommodates patients with fruit or citrus allergies, so your team always has an option without disrupting the protocol

“Patients often tell us they prefer Breeza (flavored beverage for small bowel distention) because it’s much easier to drink than traditional options. A big plus is the taste – the new mixed berry flavor has been a big hit. Many say it’s the best-tasting prep they’ve had, which makes the whole exam feel less stressful.”

–Radiology Technologist, Tallahassee, FL

Lemon-Lime

REF 221
QTY 24, 16.9 FL OZ (500 mL)
bottles per case
