

CaraClip™

wire protector

Beekley Medical®
when your diagnosis
must be right®

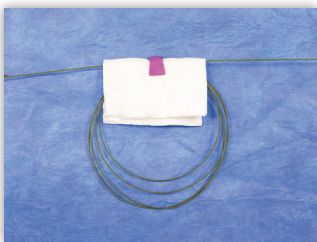

**Reduce risk of wire contamination, free up hands,
and organize wires in the sterile field.**

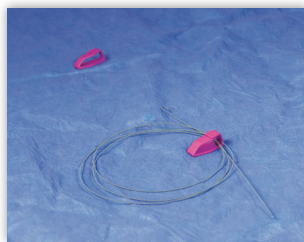

CaraClip™ wire protector was designed by an interventional radiologist to firmly adhere to the drape and contain the guidewire and other accessories, unlike unreliable methods like towels and gauze.

- Helps prevent contamination by keeping guidewires and other accessories in the sterile field.
- Helps curve, redirect, and allows for the advancement of guidewires, catheters, tubing/sheaths, and other accessories.
- Remains in place for at least 8 hours on dry drape and withstands fluids such as: blood, saline, iodine, contrast, and sterile water.
- Repositionable on dry drape and remains in the field for at least 8 hours.
- Helps manage guidewires and other accessories on the patient drape and procedure table, saving time and aiding in organization.
